## **DISCLAIMER**

The present Abbreviations of Terms is a "living document" subject to periodic review and updates based on the work of the International Seed Health Initiative and in accordance with international organisations.

## Version 1

| Abbreviations used in ISHI* |  |
|-----------------------------|--|
| Term                        | Full term  |
| BBPR                        | Bean, Brassica, Pea and Radish   |
| BC                          | Buffer (Blank) Control   |
| CCL                         | ITG Chairs and Country Leads   |
| CFU                         | Colony Forming Unit  |
| CG SH                       | Coordination Group Seed Health   |
| СТ                          | Comparative Test   |
| Cq                          | Quantification Cycle   |
| DNA                         | DeoxyriboNucleic Acid  |
| ELISA                       | Enzyme-Linked ImmunoSorbent Assay  |
| HTS                         | High Throughput Sequencing (synonym to NGS)                              |
| IAC                         | Internal Amplification Control   |
| ISF                         | International Seed Federation  |
| ISF SHM                     | ISF Seed Health Manager  |
| ISHI                        | International Seed Health Initiative                                     |
| ISHI TC                     | ISHI Technical Coordinator   |
| ISHI TL                     | ISHI Technical Lead  |
| ISHI-Veg                    | ISHI for Vegetable crops   |
| ITG                         | International Technical Group  |
| LAL                         | Look-ALike   |
| MUA                         | Material Use Agreement   |
| MV                          | Method Validation  |
| MVT                         | Method Validation Team   |
| NC                          | Negative Control   |
| NEC                         | Negative Extraction Control  |
| NGS                         | Next Generation Sequencing (synonym to HTS, which is the preferred term) |
| NPC                         | Negative Process Control   |
| NSHS                        | National Seed Health System  |
| NTC                         | Non-Template Control   |
| OD                          | Optical Density  |
| PAC                         | Positive Amplification Control   |
| PCR                         | Polymerase Chain Reaction  |
| PEC                         | Positive Extraction Control  |
| PNP                         | Pathway-Not-Proven   |
| PPC                         | Positive Process Control   |
| PT                          | Proficiency Test   |
| QC                          | Quality Control  |
| qPCR                        | quantitative real-time PCR   |
| RBLV                        | Root, Bulb and Leafy Vegetables  |
| RNA                         | RiboNucleic Acid   |
| RPLI                        | Regulated Pest List Initiative   |
| RPLI TL                     | RPLI Technical Lead  |
| RT-qPCR                     | Reverse Transcriptase qPCR   |
| SE-PCR                      | Seed Extract-Polymerase Chain Reaction                                   |
| JE-PCK                      | Seed Extract-rotymerase Cham Reaction                                    |

| SE-qPCR | Seed Extract-quantitative real-time PCR |
|---------|---|
| S:N     | Signal over Noise ratio                 |
| TG      | Technical group                         |
| TPE     | Tomato, Pepper, and Eggplant            |

<sup>\*:</sup> Abbreviations for pest names can be found in the RPLI database.
